24th Conference on Surface Modification Technologies (SMT 24)

Event - 24th Conference on Surface Modification Technologies (SMT 24) ↻

Title	24th Conference on Surface Modification Technologies (SMT 24)
When	Di, 7. September 2010 - Do, 9. September 2010

Description

24th Conference on Surface Modification Technologies (SMT 24)

Surface Modification Technology Conference

The surface modification of engineering materials allows for the manufacturing of high quality products with good corrosion and wear resistance often coupled with improved functional properties. Several surface tailoring methods have evolved in the last decade and many of these have significant industrial applications.

The Surface Modification Technology (SMT) conferences have been conducted over the last two decades in numerous countries around the world so that scientists, engineers and manufacturers in different fields can come together to appraise the present state of the art, the furture that is evolving and the numerous applications for surface modification techniques.
