

2nd EOS Conference on Manufacturing of Optical Components (EOSMOC 2011)

Veranstaltung - 2nd EOS Conference on Manufacturing of Optical Components (EOSMOC 2011) ∩

Titel	2nd EOS Conference on Manufacturing of Optical Components (EOSMOC 2011)
Wann	Mo, 23. Mai 2011 - Mi, 25. Mai 2011

Beschreibung

2nd EOS Conference on Manufacturing of Optical Components (EOSMOC 2011)

The continuing growth of the optics sector is closely bound to advancements and innovative manufacturing developments. The importance of sophisticated but economically priced optical components has never before had such a wide reaching impact on new products and processes and applications. In order to produce many of these 'next generation' optical components, new and innovative fabrication processes and test methods are crucial.

The second EOS Conference on Manufacturing of Optical Components 2011 (EOSMOC 2011) will highlight significant future market trends, emerging technologies and associated prospective developments. This meeting provides a forum to discuss all aspects of optics fabrication and testing ranging from micro-optics to large optics, and from high-value one-of-a-kind optics to mass-produced optics.

The conference will bring together commercial developments and ongoing research. It will be a unique opportunity for exchanging information with renowned researchers, scientists, engineers and professionals from all over Europe!
