Optical Fabrication and Testing 2017

Event - Optical Fabrication and Testing 2017 ↻

Title	Optical Fabrication and Testing 2017
When	So, 9. Juli 2017 - Do, 13. Juli 2017

Description

Optical Fabrication and Testing 2017

The 2017 Optical Fabrication and Testing Topical Meeting (OF&T) will emphasize new ideas, concepts and emerging applications in optics manufacturing and metrology.

The following topics will be included:

- fabrication of optics by lasers
- additive manufacturing of optical components
- molding of micro-optics
- deterministic manufacturing of aspheric/conformal/freeform optics
- advanced metrology systems and direct slope/curvature measurement
- fabrication of optics from novel materials
- efficient manufacturing and testing of large optics
- new CNC machining processes
- and advances in finishing science.

Papers of manufacturing chains from the generation of complex shapes to the fine finishing of surfaces, giving details of the process science, are especially welcomed.
