|---|---|
| **Title** | 25th Microoptics Conference in Jena |
| **When** | Do, 24. September 2020 - Sa, 26. September 2020 |

## Description

25th Microoptics Conference in Jena

The Microoptics Conference (MOC) offers lectures and discussions to provide a scientific exchange for an update and review of scientific and technical information in a very wide range of microoptical topics. Covered subjects are, e.g., design, fabrication, and measuring, as well as applications with microoptical technologies, including the fields of communication, lighting, and quantum systems.

The conference will also be accompanied by an industrial exhibition.

Besides that there will be opportunities to increase your own network (e.g., at a Conference Banquet in the Zeiss-Planetarium Jena) and to learn about new innovations and ideas (honored on-site with the Best Paper Award, and Student Paper Award). And of course, as with every previous MOC, the traditional Micro Concert will be on the agenda.
